EXPERIMENT 5-Library Management System – MoSCoW Prioritization Experiment (CO2).

step 1: Understand the MoSCoW method

MoSCoW is a technique used to prioritize project requirements.

Category	Meaning	Example
Must-Have	Essential features	Search books by title and author
Should-Have	Important features that can be implemented later	Monthly borrowing reports
Could-Have	Optional features if time and budget permit	QR code scanning
Won't-Have	Features excluded from the current release	Mobile app development in the initial phase

Step 2: Review the requirements

Open the downloaded Excel file and examine all 10 requirements.

Each requirement includes:

- Requirement description
- MoSCoW priority
- Justification for the selected priority

Step 3: Understand the justification

For example:

Requirement: Search books by title and author.

Category: Must-Have.

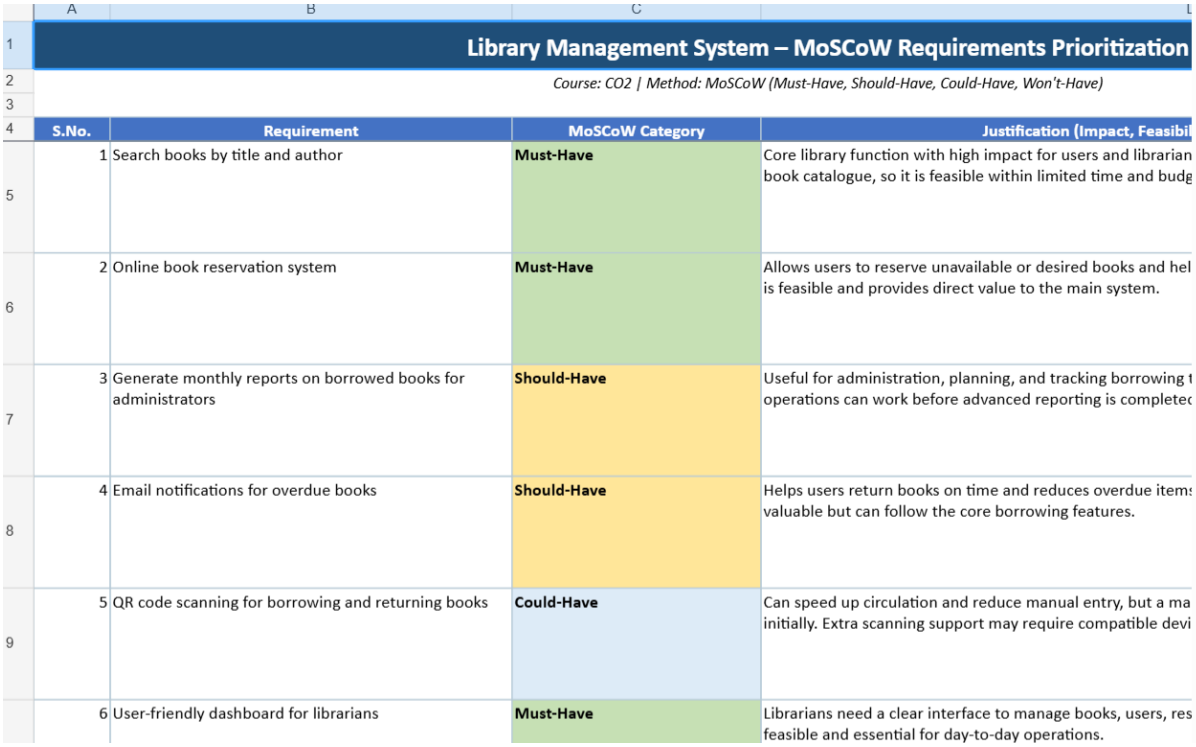

Justification: Book searching is a core library function. It helps users find books quickly and is relatively straightforward to implement within the project's time and budget constraints.

Step 4: Submit the Excel file

1. Download the Excel file.
2. Open it in Microsoft Excel.
3. Add your name and registration number if your instructor requires them.
4. Review the two worksheets.
5. Save the file.
6. Upload it to your assignment submission portal.

Aim for your practical record

To prioritize the requirements of a Library Management System using the MoSCoW method based on stakeholder impact, implementation feasibility, time, budget, and resource constraints.

	A	B	C	D
1	Library Management System – MoSCoW Requirements Prioritization			
2			*Course: CO2 | Method: MoSCoW (Must-Have, Should-Have, Could-Have, Won't-Have)*	
3				
4	**S.No.**	**Requirement**	**MoSCoW Category**	**Justification (Impact, Feasibil**
5	1	Search books by title and author	**Must-Have**	Core library function with high impact for users and librarian book catalogue, so it is feasible within limited time and budg
6	2	Online book reservation system	**Must-Have**	Allows users to reserve unavailable or desired books and hel is feasible and provides direct value to the main system.
7	3	Generate monthly reports on borrowed books for administrators	**Should-Have**	Useful for administration, planning, and tracking borrowing t operations can work before advanced reporting is completec
8	4	Email notifications for overdue books	**Should-Have**	Helps users return books on time and reduces overdue items valuable but can follow the core borrowing features.
9	5	QR code scanning for borrowing and returning books	**Could-Have**	Can speed up circulation and reduce manual entry, but a ma initially. Extra scanning support may require compatible devi
	6	User-friendly dashboard for librarians	**Must-Have**	Librarians need a clear interface to manage books, users, res feasible and essential for day-to-day operations.

Result

The ten Library Management System requirements were classified into Must-Have, Should-Have, Could-Have, and Won't-Have categories, with justifications provided for each priority.

Note: The classifications in the Excel file are suggested priorities for a student project with limited resources. You can adjust them if your instructor specifies different project constraints.
